

## Environmental Policy Statement

We fully accept our responsibilities with regard to the environment, in our business activities at our Aldershot base and in relation to working at our clients sites.

We comply with relevant environmental legislation and specifically EU directives and other statutory requirements regarding equipment disposal. We implement controls and procedures to prevent pollution and to continually improve on current and newly identified environmental impacts of our company.

We seek to minimise waste, reduce energy consumption and harmful emissions and where possible work with suppliers who have a sound Environmental Management System (EMS). On an annual basis we will establish, monitor and analyse appropriate Environmental objectives and targets.

In order to achieve our aims we have implemented and operate an EMS meeting the requirements of BS EN ISO 14001 and our Integrated Management System.

All employees are committed to this policy and programme, which will be periodically reviewed for continuing suitability.
